Elsevier Scientific Publishers Ireland Ltd.

TOXICOLOGY

SUBJECT INDEX

Volume 56 (1989)

acetaminophen, nephrotoxicity, rats, pharmacokinetics, metabolism, 167
acrolein, allylamine, rat, heart, myocyte, fibroblast, 107
alimentary tract, 1,2-dichloroethane, 1,2-dibromoethane, tissue binding, respiratory tract, 35
alkaline phosphatase activity, cadmium chloride, intestinal mucosa, rats, 87
allylamine, acrolein, rat, heart, myocyte, fibroblast, 107
amphetamine sulfate, 13-week toxicity studies, F344/N rat, B6C3F$_1$ mouse, ampicillin trihydrate, codine, 8-methoxypsoralen, α-methyldopa sesquihydrate, penicillin VK, propantheline bromide, 123
ampicillin trihydrate, 13-week toxicity studies, F344/N rat, B6C3F$_1$ mouse, amphetamine sulfate, codine, 8-methoxypsoralen, α-methyldopa sesquihydrate, penicillin VK, propantheline bromide, 123
anti-colchicine antibodies, colchicine, colchicine antidote, colchicine poisoning, 213
antioxidant defense, cyanide, lipid peroxidation, neurotoxicity, 147
aroclor 1254, immunotoxicity, rat, polychlorinated diphenyl, 197
arsenite cytotoxicity, human fibroblasts, Chinese hamster ovary cells, 289

B6C3F$_1$ mouse, 13-week toxicity studies, F344/N rat, amphetamine sulfate, ampicillin trihydrate, codine, 8-methoxypsoralen, α-methyldopa sesquihydrate, penicillin VK, propantheline bromide, 123
benzo[*a*]pyrene, metabolism, rat, trachea, implants, transplants, 63
benzo[*a*]pyrene-DNA binding, undernutrition, 223
cadmium, diethyldithiocarbamate, hepatocytes, 9
cadmium, *Drosophila*, metallothionein, LC_{50}, 315
cadmium, metallothionein, copper, degradation product, urine, 23
cadmium, zinc, cytotoxicity, testicular interstitial cell, pre-treatment, protective action, subcellular distribution, 137
cadmium chloride, alkaline phosphatase activity, intestinal mucosa, rats, 87
carcinogenesis, peroxisome, liver, initiation, foci, 1
carcinogenesis studies, toxicology studies, phenylenediamine dyes, rats, 155
Chinese hamster ovary cells, arsenite cytotoxicity, human fibroblasts, 289
coal fly ash, cytochrome *P*-450, isozymes, induction, heme metabolism, rats, 95
codine, 13-week toxicity studies, F344/N rat, B6C3F$_1$ mouse, amphetamine sulfate, ampicillin trihydrate, 8-methoxypsoralen, α-methyldopa sesquihydrate, penicillin VK, propantheline bromide, 123
colchicine, colchicine antidote, anti-colchicine antibodies, colchicine poisoning, 213
colchicine antidote, colchicine, anti-colchicine antibodies, colchicine poisoning, 213
colchicine poisoning, colchicine, colchicine antidote, anti-colchicine antibodies, 213
combined exposure, nitrogen dioxide, ozone, rat lung, xenobiotic metabolism, cytochrome *P*-450, 253
copper, metallothionein, cadmium, degradation product, urine, 23
corticosterone, T-2 toxin, immunotoxicity of T-2, hypothalamic-pituitary-adrenal axis, hypothalamic norepinephrine, gastritis, stress-response, 179
cyanide, lipid peroxidation, antioxidant defense, neurotoxicity, 147

cytochrome *P*-450, coal fly ash, isozymes, induction, heme metabolism, rats, 95
cytochrome *P*-450, nitrogen dioxide, ozone, combined exposure, rat lung, xenobiotic metabolism, 253
cytotoxicity, cadmium, zinc, testicular interstitial cell, pre-treatment, protective action, subcellular distribution, 137

degradation product, metallothionein, cadmium, copper, urine, 23
detoxication reactions, nephrotoxicity, renal tubule suspensions, organic ion transport, glutathione pathway, mercapturic acids, 47
1,2-dibromo-3-chloropropane (DBCP), nephrotoxicity, DNA damage, *P*-450 metabolism, glutathione metabolism, 273
1,2-dibromoethane, 1,2-dichloroethane, tissue binding, respiratory tract, alimentary tract, 35
1,2-dichloroethane, 1,2-dibromoethane, tissue binding, respiratory tract, alimentary tract, 35
dichloromaleic acid, maleic acid, renal function, nephrotoxicity, 229
diethyldithiocarbamate, cadmium, hepatocytes, 9
DL-α-difluoromethylornithine, 1,6-hexamethylene diamine, ornithine decarboxylase, polyamine synthesis, lymphocyte proliferation-suppression, putrescine, 301
DNA damage, 1,2-dibromo-3-chloropropane (DBCP), nephrotoxicity, *P*-450 metabolism, glutathione metabolism, 273
Drosophila, metallothionein, LC_{50}, cadmium, 315

endotoxin, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, hepatotoxicity, hypersensitivity, immunotoxicity, 239

F344/N rat, 13-week toxicity studies, B6C3F$_1$ mouse, amphetamine sulfate, ampicillin trihydrate, codine, 8-methoxypsoralen, α-methyldopa sesquihydrate, penicillin VK, propantheline bromide, 123
fibroblast, allylamine, acrolein, rat, heart, myocyte, 107
foci, peroxisome, liver, initiation, carcinogenesis, 1
forestomach, formaldehyde, rats, glandular stomach, 79
formaldehyde, rats, forestomach, glandular stomach, 79
fungicides, nephrotoxicity, rats, 263

gastritis, T-2 toxin, immunotoxicity of T-2, hypothalamic-pituitary-adrenal axis, hypothalamic norepinephrine, corticosterone, stress-response, 179
glandular stomach, formaldehyde, rats, forestomach, 79
glutathione metabolism, 1,2-dibromo-3-chloropropane (DBCP), nephrotoxicity, DNA damage, *P*-450 metabolism, 273
glutathione pathway, nephrotoxicity, renal tubule suspensions, organic ion transport, detoxication reactions, mercapturic acids, 47

heart, allylamine, acrolein, rat, myocyte, fibroblast, 107
heme metabolism, coal fly ash, cytochrome *P*-450, isozymes, induction, rats, 95
hepatocytes, cadmium, diethyldithiocarbamate, 9
hepatotoxicity, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, endotoxin, hypersensitivity, immunotoxicity, 239
1,6-hexamethylene diamine, ornithine decarboxylase, polyamine synthesis, DL-α-difluoromethylornithine, lymphocyte proliferation-suppression, putrescine, 301
human fibroblasts, arsenite cytotoxicity, Chinese hamster ovary cells, 289
hypersensitivity, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, endotoxin, hepatotoxicity, immunotoxicity, 239
hypothalamic-pituitary-adrenal axis, T-2 toxin, immunotoxicity of T-2, hypothalamic norepinephrine, corticosterone, gastritis, stress-response, 179
hypothalamic norepinephrine, T-2 toxin, immunotoxicity of T-2, hypothalamic-pituitary-adrenal axis, corticosterone, gastritis, stress-response, 179

immunotoxicity, rat, aroclor 1254, polychlorinated diphenyl, 197
immunotoxicity, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, endotoxin, hepatotoxicity, hypersensitivity, 239
immunotoxicity of T-2, T-2 toxin, hypothalamic-pituitary-adrenal axis, hypothalamic norepinephrine, corticosterone, gastritis, stress-response, 179
implants, benzo[*a*]pyrene, metabolism, rat, trachea, transplants, 63
induction, coal fly ash, cytochrome *P*-450, isozymes, heme metabolism, rats, 95
initiation, peroxisome, liver, foci, carcinogenesis, 1

intestinal mucosa, cadmium chloride, alkaline phosphatase activity, rats, 87
isozymes, coal fly ash, cytochrome *P*-450, induction, heme metabolism, rats, 95

LC_{50}, *Drosophila*, metallothionein, cadmium, 315
lipid peroxidation, cyanide, antioxidant defense, neurotoxicity, 147
liver, peroxisome, initiation, foci, carcinogenesis, 1
lymphocyte proliferation-suppression, 1,6-hexamethylene diamine, ornithine decarboxylase, polyamine synthesis, DL-α-difluoromethylornithine, putrescine, 301

maleic acid, dichloromaleic acid, renal function, nephrotoxicity, 229
mercapturic acids, nephrotoxicity, renal tubule suspensions, organic ion transport, detoxication reactions, glutathione pathway, 47
metabolism, acetaminophen, nephrotoxicity, rats, pharmacokinetics, 167
metabolism, benzo[*a*]pyrene, rat, trachea, implants, transplants, 63
metallothionein, cadmium, copper, degradation product, urine, 23
metallothionein, *Drosophila*, LC_{50}, cadmium, 315
8-methoxypsoralen, 13-week toxicity studies, F344/N rat, B6C3F$_1$ mouse, amphetamine sulfate, ampicillin trihydrate, codine, α-methyldopa sesquihydrate, penicillin VK, propantheline bromide, 123
α-methyldopa sesquihydrate, 13-week toxicity studies F344/N rat, B6C3F$_1$ mouse, amphetamine sulfate, ampicillin trihydrate, codine, penicillin VK, propantheline bromide, 123
myocyte, allylamine, acrolein, rat, heart, fibroblast, 107

nephrotoxicity, acetaminophen, rats, pharmacokinetics, metabolism, 167
nephrotoxicity, 1,2-dibromo-3-chloropropane (DBCP), DNA damage, *P*-450 metabolism, glutathione metabolism, 273
nephrotoxicity, dichloromaleic acid, maleic acid, renal function, 229
nephrotoxicity, fungicides, rats, 263
nephrotoxicity, renal tubule suspensions, organic ion transport, detoxication reactions, glutathione pathway, mercapturic acids, 47
neurotoxicity, cyanide, lipid peroxidation, antioxidant defense, 147
nitrogen dioxide, ozone, combined exposure, rat lung, xenobiotic metabolism, cytochrome *P*-450, 253

organic ion transport, nephrotoxicity, renal tubule suspensions, detoxication reactions, glutathione pathway, mercapturic acids, 47
ornithine decarboxylase, 1,6-hexamethylene diamine, polyamine synthesis, DL-α-difluoromethylornithine, lymphocyte proliferation-suppression, putrescine, 301
ozone, nitrogen dioxide, combined exposure, rat lung, xenobiotic metabolism, cytochrome *P*-450, 253

P-450 metabolism, 1,2-dibromo-3-chloropropane (DBCP), nephrotoxicity, DNA damage, glutathione metabolism, 273
penicillin VK, 13-week toxicity studies, F344/N rat, B6C3F$_1$ mouse, amphetamine sulfate, ampicillin trihydrate, codine, 8-methoxypsoralen, propantheline bromide, 123
peroxisome, liver, initiation, foci, carcinogenesis, 1
pharmacokinetics, acetaminophen, nephrotoxicity, rats, metabolism, 167
phenylenediamine dyes, toxicology studies, carcinogenesis studies, rats, 155
polyamine synthesis, 1,6-hexamethylene diamine, ornithine decarboxylase, DL-α-difluoromethylornithine, lymphocyte proliferation-suppression, putrescine, 301
polychlorinated diphenyl, immunotoxicity, rat, aroclor 1254, 197
pre-treatment, cadmium, zinc, cytotoxicity, testicular interstitial cell, protective action, subcellular distribution, 137
propantheline bromide, 13-week toxicity studies, F344/N rat, B6C3F$_1$ mouse, amphetamine sulfate, ampicillin trihydrate, codine, 8-methoxypsoralen, α-methyldopa sesquihydrate, penicillin VK, 123
protective action, cadmium, zinc, cytotoxicity, testicular interstitial cell, pre-treatment, subcellular distribution, 137
putrescine, 1,6-hexamethylene diamine, ornithine decarboxylase, polyamine synthesis, DL-α-difluoromethylornithine, lymphocyte proliferation-suppression, 301

rat, allylamine, acrolein, heart, myocyte, fibroblast, 107
rat, benzo[*a*]pyrene, metabolism, trachea, implants, transplants, 63
rat, immunotoxicity, aroclor 1254, polychlorinated diphenyl, 197
rats, acetaminophen, nephrotoxicity, pharmacokinetics, metabolism, 167
rats, cadmium chloride, alkaline phosphatase activity, intestinal mucosa, 87
rats, coal fly ash, cytochrome *P*-450, isozymes, induction, heme metabolism, 95
rats, formaldehyde, forestomach, glandular stomach, 79
rats, fungicides, nephrotoxicity, 263
rats, toxicology studies, carcinogenesis studies, phenylenediamine dyes, 155
rat lung, nitrogen dioxide, ozone, combined exposure, xenobiotic metabolism, cytochrome *P*-450, 253
renal function, dichloromaleic acid, maleic acid, nephrotoxicity, 229
renal tubule suspensions, nephrotoxicity, organic ion transport, detoxication reactions, glutathione pathway, mercapturic acids, 47
respiratory tract, 1,2-dichloroethane, 1,2-dibromoethane, tissue binding, alimentary tract, 35

stress-response, T-2 toxin, immunotoxicity of T-2, hypothalamic-pituitary-adrenal axis, hypothalamic norepinephrine, corticosterone, gastritis, 179
subcellular distribution, cadmium, zinc, cytotoxicity, testicular interstitial cell, pre-treatment, protective action, 137

T-2 toxin, immunotoxicity of T-2, hypothalamic-pituitary-adrenal axis, hypothalamic norepinephrine, corticosterone, gastritis, stress-response, 179
testicular interstitial cell, cadmium, zinc, cytotoxicity, pre-treatment, protective action, subcellular distribution, 137
2,3,7,8-tetrachlorodibenzo-*p*-dioxin, endotoxin, hepatotoxicity, hypersensitivity, immunotoxicity, 239
tissue binding, 1,2-dichloroethane, 1,2-dibromoethane, respiratory tract, alimentary tract, 35
13-week toxicity studies, F344/N rat, B6C3F$_1$ mouse, amphetamine sulfate, ampicillin trihydrate, codine, 8-methoxypsoralen, *a*-methyldopa sesquihydrate, penicillin VK, propantheline bromide, 123
toxicology studies, carcinogenesis studies, phenylenediamine dyes, rats, 155
trachea, benzo[*a*]pyrene, metabolism, rat, implants, transplants, 63
transplants, benzo[*a*]pyrene, metabolism, rat, trachea, implants, 63

undernutrition, benzo[*a*]pyrene-DNA binding, 223
urine, metallothionein, cadmium, copper, degradation product, 23

xenobiotic metabolism, nitrogen dioxide, ozone, combined exposure, rat lung, cytochrome *P*-450, 253

zinc, cadmium, cytotoxicity, testicular interstitial cell, pre-treatment, protective action, subcellular distribution, 137

Toxicology, 56 (1989) 327–328

TOXICOLOGY

VOLUME CONTENTS

Volume 56 (1989)

Failure of the peroxisome proliferator WY-14,643 to initiate growth-selectable foci in rat liver **(In producing hepatic tumors, it may be the promotional activity which is the primary effect of peroxisome proliferators)**
by R.C. Cattley, D.S. Marsman and J.A. Popp (Research Triangle Park, NC) 1–7

Response of rat hepatocyte cultures to cadmium chloride and cadmium-diethyldithiocarbamate **(Complexed cadmium is taken up more rapidly and preferentially by cell particulate)**
by E. Hellström-Lindahl and A. Oskarsson (Uppsala, Sweden) 9–21

Urinary excretion of metallothionein-I and its degradation product in rats treated with cadmium, copper, zinc or mercury **(All metals increased urinary excretion of metallothionein and its degradation products)**
by M. Sato, Y. Nagai and I. Bremner (Fukushima, Japan and Aberdeen, UK) 23–33

Epithelial binding of 1,2-dichloroethane in mice **(Non-volatile metabolites bind to nasal olfactory epithelium)**
by E.B. Brittebo, B. Kowalski, H. Ghantous and I. Brandt (Uppsala, Sweden) 35–45

Structure-nephrotoxicity relationships of glutathione pathway intermediates derived from organic solvents
(Glutathione conjugation may represent a non-nephrotoxic detoxication pathway or produce nephrotoxic mercapturates, depending upon substrate)
by A.G. Craan and M.A. Malick (Québec, Canada) 47–61

[^{3}H]Benzo[*a*]pyrene utilization in rats following tracheal implant exposure **(Benzo[*a*]pyrene released from pellets rapidly passes into and through the tracheal mucosa)**
by A.C. Marchok, G.S. Fleming, B.A. Tomkins and W.H. Griest (Oak Ridge, TN) 63–77

Chronic toxicity study on formaldehyde administered orally to rats **(The no observable effect level of formaldehyde in the drinking water was 0.02%)**
by M. Tobe, K. Naito and Y. Kurokawa (Tokyo, Japan) 79–86

The effect of chronic parenteral administration of cadmium on isoenzyme levels of alkaline phosphatase in intestinal mucosa **(Chronic cadmium lowers the isoenzymes of alkaline phosphatase in a differential manner)**
by I.G. O'Brien and L.J. King (Surrey, UK) 87–94

Induction of pulmonary and hepatic cytochrome *P*-450 species by coal fly ash inhalation in rats **(Inhalation of fly ash from coal combustion causes increases in drug oxidative enzymes)**
by S.S. Chauhan, S.K. Singh and U.K. Misra (Delhi, India) 95–105

Comparative toxicity of allylamine and acrolein in cultured myocytes and fibroblasts from neonatal rat heart **(Allylamine toxicity is mediated by its metabolic conversion to acrolein and resulting depletion of cellular ATP)**
by M. Toraason, M.E. Luken, M. Breitenstein, J.A. Krueger and R.E. Biagini (Cincinnati, OH) 107–117

Book Review 119

Contents of Journals Relating to Toxicology 121

Toxicity studies of amphetamine sulfate, ampicillin trihydrate, codeine, 8-methoxypsoralen, α-methyldopa, penicillin VK and propantheline bromide in rats and mice **(According to the results of 13-week toxicity studies, dose levels for chronic bioassays will will fall within 10 times the human dose levels when compared on a mg/m^2 body surface basis)**
by J.K. Dunnick and M.R. Elwell (Research Triangle Park, NC) 123–136

Effects of zinc on the distribution and toxicity of cadmium in isolated interstitial cells of the rat testis **(Zinc pretreatment shifts Cd away from the nucleus to other organelles and enhances Cd efflux from the cells)**
by T. Koizumi and M.P. Waalkes (Frederick, MD) 137–146

Brain lipid peroxidation and antioxidant protectant mechanisms following acute cyanide intoxication **(Cyanide toxicity may produce membrane lipid peroxidation and dysfunction, presumably because of a compromised antioxidant defense)**
by B.K. Ardelt, J.L. Borowitz and G.E. Isom (West Lafayette, IN) 147–154

Comparative carcinogenicity of two structurally similar phenylenediamine dyes (HC BLUE No. 1 and HC BLUE No. 2) in F344/N rats and B6C3F$_1$ mice **(The compound carrying the methyl substituent on the secondary amine of ring carbon-14 is carcinogenic, whereas the one carrying a 2-hydroxyethyl substituent is not)**
by F.W. Kari, J.H. Mennear, D. Farnell, R.B. Thompson and J.E. Huff (Research Triangle Park, NC and Birmingham, AL) 155–165

Strain differences in acetaminophen nephrotoxicity in rats: role of pharmacokinetics **(Strain differences in nephrotoxic potential cannot be explained by variations in pharmacokinetic parameters or in major metabolic pathways**
by J.B. Tarloff, R.S. Goldstein and J.B. Hook (King of Prussia, PA) 167–177

Relationship of the hypothalamic-pituitary-adrenal axis with chemically induced immunomodulation. I. Stress-like response after exposure to T-2 toxin **(Immunotoxic effects of T-2 may be mediated directly or indirectly through gastric inflammation, endotoxin absorption and stress reaction)**
by M.J. Taylor, R.A. Smart and R.P. Sharma (Logan, UT) 179–195

Evaluation of the immunotoxicity of low level PCB exposure in the rat **(Altered immune function may be related to overt Aroclor 1254 toxicity in the rat)**
by R.J. Smialowicz, J.E. Andrews, M.M. Riddle, R.R. Rogers, R.W. Luebke and C.B. Copeland (Research Triangle Park, NC) 197–211

The effect of colchicine-specific active immunization on colchicine toxicity and disposition in the rabbit **(Circulating antibodies bind colchicine in vivo and lower free colchicine levels leading to lower toxicity)**
by J.M. Scherrmann, M. Urtizberea, P. Pierson and N. Terrien (Paris, France) 213–222

Brief Communication

Effect of food restriction on benzo[*a*]pyrene binding to DNA in Wistar rats (Malnutrition enhances the binding of benzo[*a*]pyrene metabolites to liver DNA)
by V. Jagadeesan and K. Krishnaswamy (Hyderabad, India) 223–226

Contents of Journals Relating to Toxicology 227–228

Alterations in the renal function of male and female rats exposed to maleic acid, dichloromaleic acid, and both compounds **(Female rats appear to be more susceptible)**
by W.R. Christenson, M.E. Davis and W.O. Berndt (Omaha, NE and Morgantown, WV) 229–238

Characteristics of 2,3,7,8-tetrachlorodibenzo-*p*-dioxin induced endotoxin hypersensitivity: association with hepatotoxicity **(Decreased hepatic RNA synthesis may be the basis for the TCDD-endotoxin interaction)**
by G.J. Rosenthal, E. Lebetkin, J.E. Thigpen, R. Wilson, A.N. Tucker and M.I. Luster (Research Triangle Park, NC) 239–251

Effects of nitrogen dioxide and ozone in combination on xenobiotic metabolizing activities of rat lungs **(Ozone exposure increase pulmonary activity of mixed function oxidases, combined exposure to nitrogen dioxide and ozone lowers it)**
by Y. Takahashi and T. Miura (Ibaraki, Japan) 253–262

Comparative acute renal effects of three *N*-(3,5-dichlorophenyl)carboximide fungicides: *N*-(3,5-dichlorophenyl)succinimide, vinclozolin and iprodione **(Fungicidal efficacy does not correlate with nephrotoxicity)**
by G.O. Rankin, V.J. Teets, D.W. Nicoll and P.I. Brown (Huntington, WV) 263–272

Role of *P*-450 activity and glutathione levels in 1,2-dibromo-3-chloropropane tissue distribution, renal necrosis and in vivo DNA damage **(Organ toxicity of the nematocide DBCP is influenced by monooxygenase activity rather than by glutathione conjugation)**

by M. Låg, J.G. Omichinski, E.J. Søderlund, G. Brunborg, J.A. Holme, J.E. Dahl, S.D. Nelson and E. Dybing (Oslo, Norway and Seattle, WA) 273–288

Differential cytotoxicity of sodium arsenite in human fibroblasts and Chinese hamster ovary cells (Arsenite toxicity depends on cell cycle phase and availability of GSH and reveals differences between the two cell lines tested)
by T.-C. Lee, J.-L. Ko and K.Y. Jan (Taiwan, Republic of China) 289–299

Suppression of lymphocyte proliferation by hexamethylene diamine (HDDH may act by interfering with intracellular polyamine metabolism)
by R.W. Luebke, C.B. Copeland, O. Irsula, M.M. Riddle, R.R. Rogers, C. Lau and R.J. Smialowicz (Research Triangle Park, NC) 301–313

Resistance of *Drosophila* to cadmium: biochemical factors in resistant and sensitive strains (Differences in metallothionein content do not explain the genetically detectable difference in Cd resistance)
by H.J Gill, D.L. Nida, D.A. Dean, M.W. England and K.B. Jacobson, (Oak Ridge, TN) 315–321
